## Exploratory Testing Recorder & Documentation Tool

Record Tests
Intelligent capture technology tracks all interactions from the testing session and automatically creates defect documentation.

Submit to Jira
Easily submit detailed defect documentation to Jira so you can quickly resolve issues.

### Accelerate Test Automation
Reduce your test automation bottleneck by instantly turning a test session into an automated test script.

Save Time
You do the testing, and we'll handle the documentation

Better Collaboration
Provide your Jira dev teams with thorough steps to reproduce bugs found

Explore More
Go deeper into an application than ever before to find bugs and areas of improvement

Streamline Submission
Submit your session steps annotations into Jira as bugs or any other issue type

Centralize Test Sessions
Keep all your test documentation in one, centralized location for everyone to access

Robust Documentation
Generate highly detailed reports for auditing, training and compliance

Benefits for the Testers

- Write test cases faster
- Stay organized with less effort
- Store everything in one location
- Coordinate with other testers
- Dedicated tool for exploratory testing

Benefits for the Team

- Encourage collaboration and eliminate redundancy
- Align QA and UAT efforts
- Greater visibility into the testing process
- Generate reports that make insights easier
- Manage all session debriefs in one central location

Benefits Across an Organization

- Continuously improve testing process
- Minimize post production software defects
- Accelerate the testing life cycle
- Get better visibility across the software development lifecycle
