

Accelerate digital  
business with the  
Tricentis Continuous  
Testing Platform

# What's slowing your digital agenda?

Accelerating digital business is a top priority for IT leaders, who are launching key initiatives to:

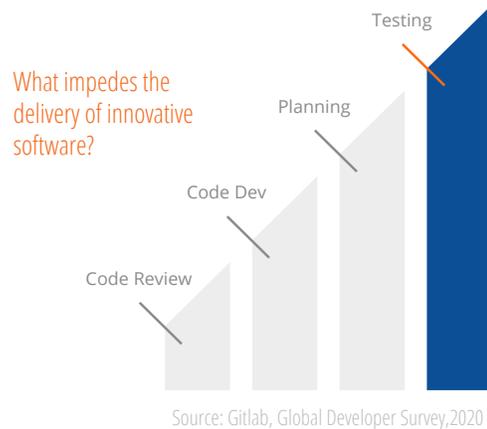

- Deliver software faster with **DevOps**
- Shift IT infrastructure to the **cloud**
- Modernize core business **applications**

But outdated approaches to testing can derail these priorities, as industry research shows **testing is the #1 bottleneck to IT speed and agility.**

And the consequences of the testing bottleneck are severe. Deadlines slip. Costs overrun. Projects fail.

However, there is now a way to transform testing from a bottleneck into a digital business accelerator.

One that leading enterprises are using to speed up software delivery while reducing risks and lowering costs. With these savings, they can shift budget previously allocated for maintenance and testing to fund new innovation.

## The Tricentis advantage.

Tricentis offers a new and fundamentally different way to tackle software testing. Unlike traditional manual or siloed testing, our totally automated, AI-powered, continuous testing platform is built for speed from the ground up. Now, testing takes just minutes or hours instead of days or weeks, while being far more cost effective and quality focused.

## Speed changes everything.

With the Tricentis continuous testing platform, our customers are releasing software faster, funding new innovation, and succeeding with their digital initiatives. Benefits like these mean you can, too.

10x

### ACCELERATE RELEASE SPEED

Leveraging artificial intelligence and the efficiencies of the cloud, you can accelerate software delivery by reducing test cycle times 10x.

40%

### REDUCE TESTING COSTS

Replace error-prone manual testing with 90% automation rates that can reduce your testing costs 40%. Free up resources for new, revenue-generating, digital IT initiatives.

90%

### INCREASE SOFTWARE QUALITY

Boost release confidence and obtain business risk coverage >90%. The quality of your software goes up. The stress of your day goes down.

# We've got your business covered.

Our platform is built for the digital enterprise. It covers virtually every packaged and custom application and every industry, ensuring that any update you make to your cloud and on-prem applications will work as expected and not break critical end-to-end business processes. This lets you deliver new functionality faster while reducing your overall application TCO.

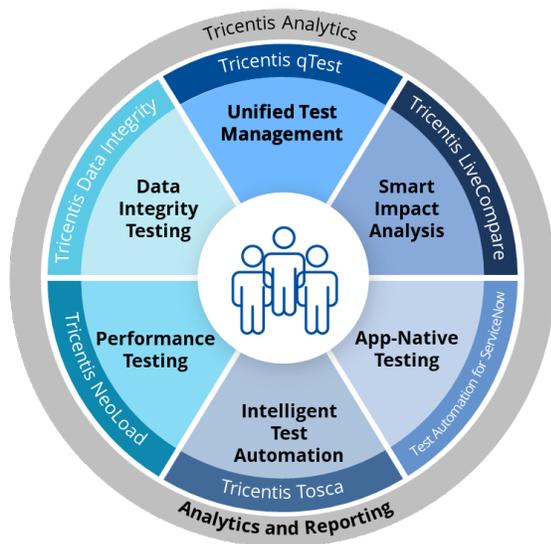

## Deploy custom and packaged apps at DevOps speed

Our platform supports hundreds of technologies and integrates with practically any open-source or commercial Agile planning and CI/CD tool to bring continuous testing to all your development teams.

<b>OPEN SOURCE FRAMEWORK</b>	
<b>OPEN SOURCE EXECUTION</b>	
<b>DEVOPS INTEGRATIONS</b>	

# The world's #1 continuous testing platform

The **Tricentis continuous testing platform** covers everything from agile development to complex enterprise applications with a unique set of capabilities that unify all aspects of testing.

Our platform is:

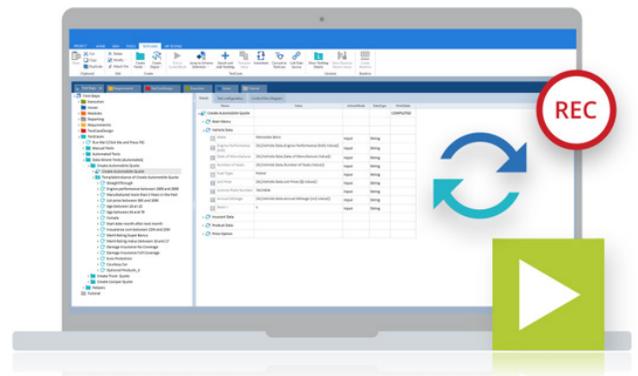

- **Totally automated**  
Accelerating all phases of testing, from unit to performance.
- **Fully codeless**  
Making it easy for non-technical business users and team members to use.
- **AI-powered**  
Leveraging advanced ML technologies to enable faster, smarter testing.

## INTELLIGENT TEST AUTOMATION

### Tricentis Tosca

**Tricentis Tosca** helps your teams release higher-quality software, faster, no matter where it's deployed— on prem, in the cloud, or in hybrid landscapes, or where it's run— on mainframe, desktop, web, or mobile apps. Tosca helps teams automate 90% or more of their end-to-end testing by focusing on business risk, enabling you to accelerate innovation while ensuring your business continues to run smoothly.

- **Vision AI** generates automated test cases for virtually any application or technology—even mockups—enabling testing to start much earlier in the development lifecycle.
- **Automation Recording Assistant** lets business users build test automation quickly and easily as they perform daily business routines.
- **Service virtualization and test data management** capabilities eliminate continuous testing roadblocks so testing finishes faster.

**VARIAN** "We've now used Tricentis test automation for 3 years for many enhancement pack and support pack upgrades, as well as for our SAP S/4HANA migration. Manual testing is simply not scalable. Test automation reduced testing time 93% and reduced testing costs 35%."

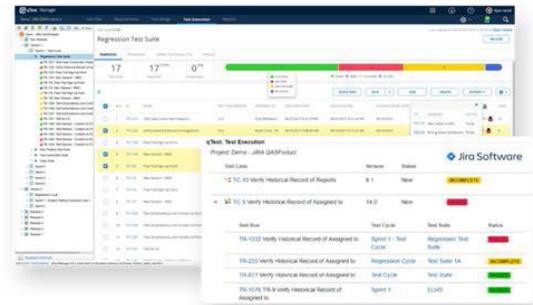

– Head of Strategy for Testing Center of Excellence

## UNIFIED TEST MANAGEMENT AND ORCHESTRATION

# Tricentis qTest

**Tricentis qTest** unifies test management across your organization, acting as a common repository for your test plans, cases, and history. By sharing and reusing test cases across projects, and integrating with any part of the DevOps toolchain, qTest drives testing velocity, consistency, and best practices at scale.

- **Manage manual, exploratory, and automated testing** in one place with qTest.
- **Enhance collaboration between QA and development** with a best-in-class JIRA integration, and support Agile and DevOps methodologies alongside waterfall development.
- **Schedule and orchestrate automated testing workflows** through integration with any component of the DevOps toolchain.

- **Easily trace tests and defects** back to requirements and maintain a complete audit trail.

**GUARDIAN** *"Tricentis test management has helped increase testing efficiency by around 30%.*

*A lot of that is due to being able to reuse assets and get to the metrics quickly. I can't overemphasize how easy it makes things!"*

– Robina Laughlin, Assistant Vice President, IT Quality Management

## ANALYTICS AND REPORTING

# Tricentis Analytics

**Tricentis Analytics** helps businesses make data-driven decisions with comprehensive, real-time visibility and insights into all your testing activities.

- **Pre-built reports** for immediate visibility, with high customization to meet your business needs.
- **Integrates with your data warehouse** and reporting tools.

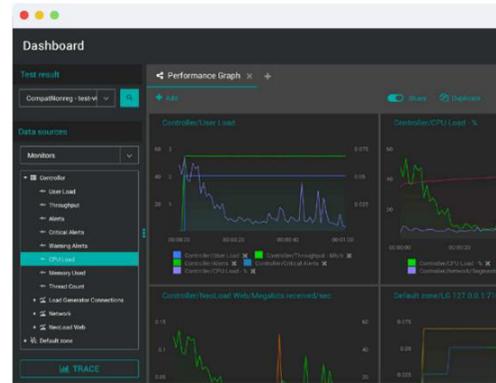

## PERFORMANCE TESTING

# Tricentis NeoLoad

**Tricentis NeoLoad** simplifies performance testing so that application delivery teams can take a standardized approach to ensure continuous performance, reliability, and scalability from development to production.

- **Codeless solution** enables entry-level testers as well as performance engineers to quickly scale performance testing productivity.
- **Mobile, web, and desktop application testing** capabilities cover everything from API calls to critical enterprise applications such as SAP GUI and Citrix virtualized applications.
- **Reuse of functional Tosca and Selenium tests** speeds the planning, creation, and maintenance of your performance tests through simple conversions of your existing regression tests.

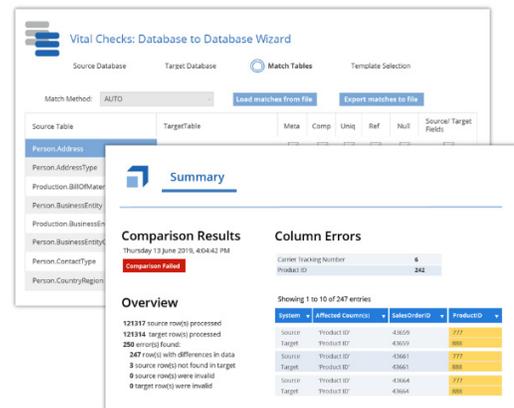

**DELL** With NeoLoad Dell reduced the time it takes to design and create performance tests by 40%. NeoLoad also helped Dell achieve a 30% reduction in the time and effort required to maintain their performance tests compared to their legacy performance testing solution.

## DATA INTEGRITY

# Tricentis Data Integrity

**Tricentis Data Integrity** automates end-to-end data testing to ensure the reports, analytics, and compliance data that your business relies on remains accurate as it moves through your ever-evolving data landscapes.

- **Supports all data technologies** including databases, data warehouses, and CI/CD tools.
- **Built on Tosca** to enable easy automation and risk-based testing prioritization.

**RBS** “The ability to automatically expose data impacts — as soon as they enter our systems — is vital to maintaining our competitive advantage, as well as our regulatory compliance.”

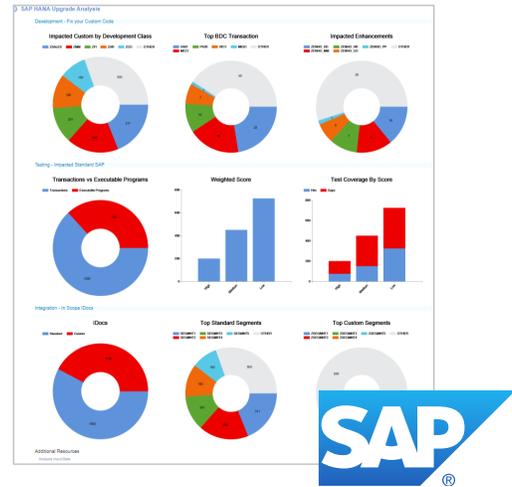

– Stephen Fishwick, Director, Head of DWH MI and Archiving, Enterprise and Data Solutions at RBS

**SMART IMPACT ANALYSIS**

# Tricentis LiveCompare

**Tricentis LiveCompare** provides smart impact analysis for SAP updates, pinpointing exactly what you need to test to ensure a zero-defect release. Teams using LiveCompare reduce release test scopes by 85% or more, accelerating and de-risking your SAP initiatives.

- **Risk AI** analyzes your current SAP landscape and usage to determine the risks to your business from any change to your SAP systems.
- **Intelligent test planning** identifies the right tests to execute or create in qTest, Tosca, or SAP Solution Manager to mitigate the risks in an SAP release.

- **Release readiness audits** provide real-time tracking of your testing progress so teams can release with confidence.

**FORTUNE 100 FOOD & BEVERAGE COMPANY** *"Tricentis LiveCompare ensures we're testing the right things and spending resources in the right places. That has translated into a direct resource savings of 30-40%."*

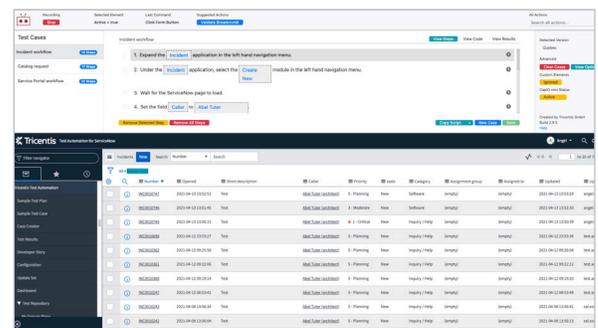

- Application Development Lead for the SAP Platform

**APP-NATIVE TESTING**

# Tricentis Test Automation for ServiceNow

**Tricentis Test Automation for ServiceNow** enables automated testing from within the ServiceNow platform, enabling 40x faster testing of ServiceNow updates.

- **Built natively** on ServiceNow to provide full testing visibility and reporting within the platform.
- **Enables all team members** including business users, developers, and testers to automate tests.
- **Streamlines ServiceNow testing** so teams can focus on innovating instead of testing.

# Why choose Tricentis?

**We're the undisputed leader.** Tricentis is the leader in enterprise test automation. We're the only vendor in the category to achieve leader status in all top analyst reports, including Gartner, Forrester, and IDC.

## ENTERPRISE-GRADE AUTOMATION.

Achieve resilient, end-to-end test automation across any architecture or application stack at scale by tapping our native support for more than 160 apps and technologies—from on-prem to the cloud, mainframes to microservices.

## KEEP THE TEST. ELIMINATE THE CODE.

Our AI-driven and model-based approach enables anyone from developers to business experts to achieve automation—while eliminating the maintenance headache that typically erodes these initiatives.

## REPORT GLOBALLY. FIX CENTRALLY.

Enjoy complete, end-to-end visibility across all the tools in your software delivery lifecycle. Centralized reporting—from user-story creation to code commit to test execution—speeds up remediation while helping prevent errors in the first place.

## Recognized leader by industry analysts
